## На что мы вас проверяли

- ✔ **Поиск слабых паролей для SSH**  
Выполняет брутфорс ТОП 100 паролей SSH сервера
- ✔ **Поиск поддоменов**  
Проверка находит поддомены веб-сервера, запрашивая базу данных журналов прозрачности сертификатов Google
- ✔ **Проверка возможности захвата поддомена**  
Проверяет, есть ли какие-либо поддомены, уязвимые для захвата
- ✔ **RDP отключена NLA аутентификация**  
Проверяет, не настроен ли удаленный рабочий стол для использования проверки подлинности на сетевом уровне (NLA)
- ✔ **Проверка слабых паролей на FTP**  
Выполняет брутфорс ТОП 100 паролей FTP-сервера
- ✔ **Поддержка SSLv2**  
Определяет, поддерживает ли сервер устаревший и менее безопасный SSLv2, и обнаруживает, какие шифры он поддерживает
- ✔ **Обнаружение небезопасных форм загрузки файлов**  
Обнаружение небезопасных форм загрузки файлов в веб-приложениях с использованием различных методов, таких как изменение заголовка Content-type или создание действительных файлов изображений, содержащих полезную нагрузку в комментариях
- ✔ **Проверка на CSRF уязвимость**  
Обнаруживает уязвимости подделки межсайтовых запросов (CSRF). Он попытается обнаружить их, проверив каждую форму, если она содержит непредсказуемый токен для каждого пользователя. Без него злоумышленник может подделать вредоносные запросы
- ✔ **Уязвимость XSS**  
Проверяет на наличие XSS уязвимостей
- ✔ **Конфигурация SSL**  
Проверка будет предупреждать об определенных неправильных настройках SSL, таких как сертификаты, подписанные MD5, некачественные эфемерные параметры DH и уязвимость POODLE. Конечным результатом является список всех наборов шифров и компрессоров, которые принимает сервер. Каждый набор шифров отображается с буквенной оценкой (от А до F), указывающей на прочность соединения. Оценка основана на криптографической стойкости обмена ключами и потокового шифра. Выбор алгоритма целостности (хеширования) сообщения не имеет значения. Строка вывода, начинающаяся с наименьшей силы, показывает силу самого слабого предложенного шифра. Оценка основана на Руководстве по оценке SSL-серверов Qualys SSL Labs, но не учитывает поддержку протокола (версия TLS), которая составляет 30% от рейтинга SSL Labs
- ✔ **Сервер MySQL с пустым паролем**  
Проверяет наличие сервера MySQL с пустым паролем для "root" или "anonymous"
- ✔ **Сервер FTP с пустым паролем**  
Проверяет, разрешает ли FTP-сервер анонимный вход. Если анонимный разрешен, получает список корневого каталога и выделяет файлы, доступные для записи
- ✔ **Поиск слабых паролей для Wordpress CMS**  
Выполняет брутфорс ТОП 100 паролей Wordpress CMS
- ✔ **Заголовки безопасности**  
Проверяет заголовки HTTP-ответа, относящиеся к безопасности, указанные в OWASP Secure Headers Project, и дает краткое описание заголовка и его значения конфигурации. Проверяет HSTS (строгая безопасность транспорта HTTP), HPKP (контакты открытого ключа HTTP), параметры X-Frame
- ✔ **Поиск уязвимостей для SSH**  
Проверка ищет уязвимости для SSH. К примеру, возможность авторизации по паролю

- ✓ **Поиск SQL инъекций**  
Специальные программы ищут URL-адреса, содержащие запросы, уязвимые для атаки с использованием SQL-инъекции. Он также извлекает формы с найденных веб-сайтов и пытается определить уязвимые поля. Сценарий выполняет поиск HTTP-сервера в поисках URL-адресов, содержащих запросы. Затем он переходит к объединению созданных команд SQL с уязвимыми URL-адресами для получения ошибок. Ошибки анализируются на предмет уязвимости URL-адреса для атаки
- ✓ **Поиск слабых паролей для MySQL**  
Выполняет брутфорс ТОП 100 паролей MySQL сервера
- ✓ **Информация о SSL сертификате**  
Получает сертификат SSL сервера. Проверяет срок действия и commonName, organizationName, stateOrProvinceName и countryName
- ✓ **Уязвимость обхода каталогов**  
Проверяет, уязвим ли веб-сервер для обхода каталогов. В проверке используется несколько приемов: - Общий обход каталога путем запроса путей - Известные конкретные обходы нескольких веб-серверов - Обход строки запроса. Это отправляет обходы в виде параметров строки запроса на пути, которые выглядят так, как будто они относятся к локальному имени файла.
- ✓ **Поиск уязвимостей для веб-приложений**  
Проверка ищет веб-приложения на хостинге, затем выполняет поиск уязвимости в зависимости вида приложения. Мы можем найти GitLab, Wordpress
- ✓ **Поиск уязвимостей для Jira**  
Проверка ищет уязвимости в Jira
- ✓ **Перечисление веб-каталогов**  
Проверяет каталоги, используемые популярными веб-приложениями и серверами
- ✓ **Поиск уязвимостей для 1С**  
Проверка ищет уязвимости в 1С Enterprise
- ✓ **Общий поиск сервисов и уязвимостей**  
Обнаруживает сетевые ресурсы, а затем сканирует порты чтобы определить ключевые характеристики ресурса, такие как операционная система, тип устройства и службы. XSignal подключается к ресурсу и собирает информацию об установленных приложениях а также выявляет уязвимости.

Другие возможности системы:

- ✓ **Регулярные проверки**  
В среднем каждый день обнаруживается более 20 новых уязвимостей. Хакеру может понадобиться только один из них, чтобы взломать ваши системы. План Pro включает ежемесячные проверки на наличие последних слабых мест, которые могут повлиять на ваши системы, и гарантирует, что любые недавние изменения не поставили под угрозу вашу безопасность.
- ✓ **Возникающие угрозы**  
Время между появлением новых уязвимостей и их использованием хакерами составляет дни, а не недели. Для организаций, которым нужен более зрелый подход к кибербезопасности, наши средства сканирования возникающих угроз обнаруживают критические угрозы для ваших систем, не дожидаясь следующей ежемесячной проверки.

## Сервисы

| Имя           | Порт  | ПО            | Версии     |

# Информация о сканировании

## Цели, включенные в это сканирование

2fa.1cbit.ru

## Время сканирования

Это сканирование выполнялось с 11.05.2023 11:03:16

## Результаты дополнительных проверок

### Поиск поддоменов

#### Описание

Проверка находит поддомены веб-сервера, запрашивая базу данных журналов прозрачности сертификатов Google.

### Информация о SSL сертификате

#### Описание

Получает сертификат SSL сервера. Проверяет срок действия и commonName, organizationName, stateOrProvinceName и countryName.

#### Порт 443

| Сертификат                       | Страна | Название компании | С даты          | По дату         |           |
|----------------------------------|--------|-------------------|-----------------|-----------------|-----------|
| GlobalSign GCC R3 DV TLS CA 2020 | BE     | GlobalSign nv-sa  | 06 июл 22 14:14 | 07 авг 23 14:14 | корректно |

### Заголовки безопасности

#### Описание

Проверяет заголовки HTTP-ответа, относящиеся к безопасности, указанные в OWASP Secure Headers Project, и дает краткое описание заголовка и его значения конфигурации. Проверяет HSTS (строгая безопасность транспорта HTTP), HPKP (контакты открытого ключа HTTP), параметры X-Frame.

#### Порт 443

| Заголовок                             | Значение   | Статус    |
|---------------------------------------|--|-----------|
| Expect_CT                             | ---  | не найден |
| X_Permitted_Cross_Domain_Policies     | ---  | не найден |
| Pragma                                | ---  | не найден |
| X_Content_Type_Options                | ---  | не найден |
| Expires                               | ---  | не найден |

## Конфигурация SSL

### Описание

Проверка будет предупреждать об определенных неправильных настройках SSL, таких как сертификаты, подписанные MD5, некачественные эфемерные параметры DH и уязвимость POODLE. Конечным результатом является список всех наборов шифров и компрессоров, которые принимает сервер. Каждый набор шифров отображается с буквенной оценкой (от A до F), указывающей на прочность соединения. Оценка основана на криптографической стойкости обмена ключами и потокового шифра. Выбор алгоритма целостности (хеширования) сообщения не имеет значения. Строка вывода, начинающаяся с наименьшей силы, показывает силу самого слабого предложенного шифра. Оценка основана на Руководстве по оценке SSL-серверов Qualys SSL Labs, но не учитывает поддержку протокола (версия TLS), которая составляет 30% от рейтинга SSL Labs.

## Уязвимость обхода каталогов

### Описание

Проверяет, уязвим ли веб-сервер для обхода каталогов. В проверке используется несколько приемов: - Общий обход каталога путем запроса путей - Известные конкретные обходы нескольких веб-серверов - Обход строки запроса. Это отправляет обходы в виде параметров строки запроса на пути, которые выглядят так, как будто они относятся к локальному имени файла..

## Поддержка SSLv2

### Описание

Определяет, поддерживает ли сервер устаревший и менее безопасный SSLv2, и обнаруживает, какие шифры он поддерживает.

## Уязвимость XSS

### Описание

Проверяет на наличие XSS уязвимостей.

## Обнаружение небезопасных форм загрузки файлов

### Описание

Обнаружение небезопасных форм загрузки файлов в веб-приложениях с использованием различных методов, таких как изменение заголовка Content-type или создание действительных файлов изображений, содержащих полезную нагрузку в комментарии.

## Поиск SQL инъекций

### Описание

Специальные программы ищут URL-адреса, содержащие запросы, уязвимые для атаки с использованием SQL-инъекции. Он также извлекает формы с найденных веб-сайтов и пытается определить уязвимые поля. Сценарий выполняет поиск HTTP-сервера в поисках URL-адресов, содержащих запросы. Затем он переходит к объединению созданных команд SQL с уязвимыми URL-адресами для получения ошибок. Ошибки анализируются на предмет уязвимости URL-адреса для атаки.

## Перечисление веб-каталогов

### Описание

Проверяет каталоги, используемые популярными веб-приложениями и серверами.

### Порт 443

## Проверка на CSRF уязвимость

### Описание

Обнаруживает уязвимости подделки межсайтовых запросов (CSRF). Он попытается обнаружить их, проверив каждую форму, если она содержит непредсказуемый токен для каждого пользователя. Без него злоумышленник может подделать вредоносные запросы.

## Поиск слабых паролей для SSH

### Описание

Выполняет брутфорс ТОП 100 паролей SSH сервера.

Проверка выполнена успешно  
Слабых паролей для SSH не обнаружено

## Сервер MySQL с пустым паролем

### Описание

Проверяет наличие сервера MySQL с пустым паролем для "root" или "anonymous".

Проверка выполнена успешно

Службы MySQL с анонимным доступом не найдены

## Сервер FTP с пустым паролем

### Описание

Проверяет, разрешает ли FTP-сервер анонимный вход. Если анонимный разрешен, получает список корневого каталога и выделяет файлы, доступные для записи.

Проверка выполнена успешно

FTP с анонимным доступом не найдены

## Проверка слабых паролей на FTP

### Описание

Выполняет брутфорс ТОП 100 паролей FTP-сервера.

Проверка выполнена успешно

Слабых паролей для FTP не обнаружено

## Поиск слабых паролей для MySQL

### Описание

Выполняет брутфорс ТОП 100 паролей MySQL сервера.

Проверка выполнена успешно

Слабых паролей MySQL не обнаружено

## Поиск слабых паролей для Wordpress CMS

### Описание

Выполняет брутфорс ТОП 100 паролей Wordpress CMS.

Проверка выполнена успешно

Слабых паролей не обнаружено

## Поиск уязвимостей для веб-приложений

### Описание

Проверка ищет веб-приложения на хостинге, затем выполняет поиск уязвимости в зависимости вида приложения. Мы можем найти GitLab, Wordpress.

⊖ Известных веб-приложений не обнаружено

## Поиск уязвимостей для 1C

### Описание

Проверка ищет уязвимости в 1C Enterprise.

⊖ 1C Enterprise не найден

## Поиск уязвимостей для SSH

### Описание

Проверка ищет уязвимости для SSH. К примеру, возможность авторизации по паролю.

## RDP отключена NLA аутентификация

### Описание

Проверяет, не настроен ли удаленный рабочий стол для использования проверки подлинности на сетевом уровне (NLA).

## Поиск уязвимостей для Jira

### Описание

Проверка ищет уязвимости в Jira.

🚫 Уязвимости не найдены

## Проверка возможности захвата поддомена

### Описание

Проверяет, есть ли какие-либо поддомены, уязвимые для захвата.
